

South Australia & Victoria

**NEW**

LPB11-1728

*“The Short AH Wheat that shoots for yield with less straw”*

## KEY FEATURES

- A high yielding AH variety suited to South Australia and Victoria.
- Short canopy for easier management is the standout feature.
- Upside yield with stability for good and bad years similar to Mace and good grain package with low screenings.
- Mid maturity that is 3-4 days later than Mace (between Mace and Trojan).
- Good YLS (MRMS) for rotation flexibility. Solid Stem Rust (MRMS) resistance; base level of resistance to Stripe Rust (MSS) and susceptible to Leaf Rust (S).

## AGRONOMIC FEATURES

Arrow has performed very well in main season LongReach (2011-2015) and NVT (2015) trials with similar yield and yield stability to Mace. Arrow is AH quality in SA and Victoria. The variety has a large grain size and has shown to be robust for screenings, even in the tight 2015 finish when it had lower screenings than Mace. Test weights have been similar to reliable lines such as Corack and Mace. Sprouting tolerance is an improvement over Wyalkatchem and looks similar to Trojan, while Black Point tolerance is good (MRMS).

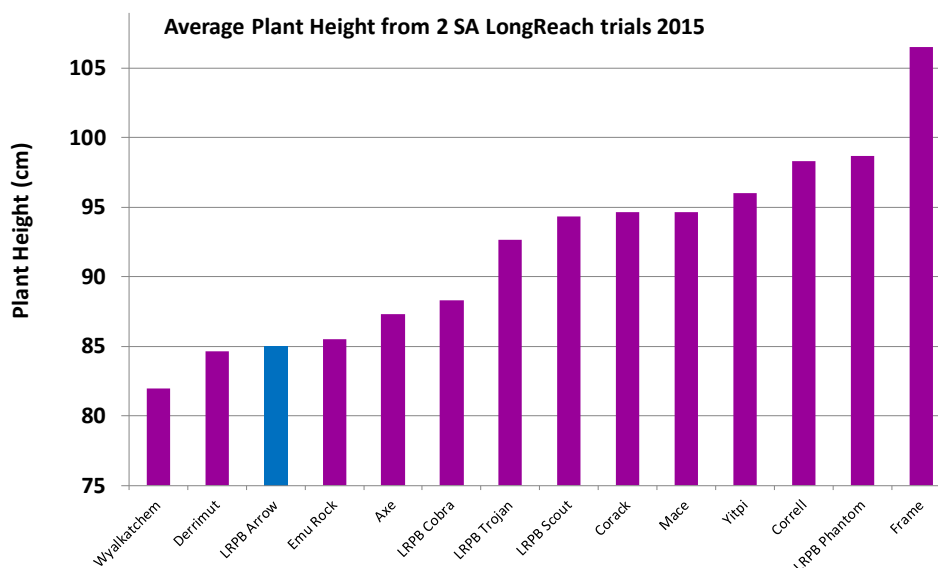

Arrow is suitable for wheat on wheat rotation phase with very good Yellow Leaf Spot resistance (MRMS). Arrow is susceptible to Stripe rust (MSS) and will require some form of chemical protection to maximise performance, especially in the cooler winter period. It has solid resistance to Stem Rust (MRMS) but susceptible to Leaf Rust (S).

## DISEASE AND PEST RATINGS

Variety	Stem Rust	Leaf Rust	Stripe Rust Yr17+27+	Yellow Spot	Septoria tritici SA	Crown Rot	Prat. thornei Tol.	CCN Res	Black Point
LRPB Arrow	MRMS	S	MSS	MRMS	S	MSSp	MT-MIp	S	MRMS

Resistance rating: VS=Very Susceptible, S=Susceptible, MS=Moderately Susceptible, MR=Moderately Resistant, R=Resistant.

Tol Rating - T =Tolerant, MT=Moderately Tolerant, MI =Moderately Intolerant, I = Intolerant, VI =Very Intolerant. Data sourced NVT and LongReachPlant Breeders 2016. p = Preliminary Data Based on limited data set

Arrow shows medium vigour and a good tillering ability that fills space laterally early in the season, with a compact plant type that is comparable to Cobra in plant structure. Arrow is mid-maturity with heading time being between Mace and Trojan. At maturity Arrow is similar height to Wyalkatchem. The canopy structure suits direct drilling and stubble retention systems.

### PLANT BREEDERS RIGHTS

LongReach Arrow is protected by Plant Breeders Rights (PBR). In regard to propagating material (planting seed) of this variety, any unauthorised commercial production or reproduction, conditioning for propagation, offering for sale, sale, import, export or stocking of propagating material is an infringement under the Plant Breeders Rights Act 1994. No grower to grower trading of seed of LongReach Arrow is allowed.

### End Point Royalty (EPR)

Each time a grower purchases seed of LongReach Arrow the grower agrees to comply with the Variety Licence and Royalty Agreement, including agreement to pay the EPR of \$3.00 per tonne (GST Excl). EPR is payable on all grain production, except on seed retained by the grower for replanting by the grower. The majority of the EPR will be paid by Advanta Seeds to the Breeder (LongReach Plant Breeders) for investment in future wheat breeding programs.
