

LONGREACH HAVOC

STATE: WA

FREE TO TRADE

Please complete the grower sales declaration form available from the Pacific Seeds website.

VARIETY ATTRIBUTES

Havoc has good yield stability and is well adapted to Northern quick finishing, low-medium rainfall areas of WA.

Premium Hard AH (N) classification and suitable for Noodle blending segregations in WA.

Yield advantage of 2-7% on Mace and competitive with Scepter in sub 3.0t/ha years.

Quick maturity for complementary main season planting, good protein accumulation and reliable grain package.

Improved powdery mildew resistance (MS) over Scepter to reduce disease build up in lower canopies.

DISEASE RESISTANCE

Stem Rust	S
Leaf Rust	S
Stripe Rust YrWA	MR
Septoria Tritici Blotch WA	MRMS
Septoria Nodorum Blotch (Leaf)	MS
Crown Rot	MSS
Yellow Spot	MRMS
Powdery Mildew WA	MS
CNN Res	S
Black Point	MS
P.neglectus (Res)	S
P.neglectus (Tol)	MT

AGRONOMIC BACKGROUND

The cross (Mace/LPB07-0980) aimed to combine Mace's broad adaption with the superior canopy of a high yielding LongReach breeding line.

Havoc has a compact plant type throughout the season with an erect open canopy with upright leaves. Havoc spends time developing tillers in a similar manner to Wyalkatchem but with noticeable broader leaves to improve competition and vigour. Importantly Havoc has retained Wyalkatchem's trait of prioritising tillering and does not rush like Mace has shown a tendency to do in warmer winters.

The typical timing of heading is between Corack and Mace making Havoc a quick main season variety. The flag leaf is distinctively erect with blocky heads at grain filling and Havoc has similar height to Cobra or Wyalkatchem at maturity.

From heading to grain filling, Havoc has shown it develops very fast to be a quick finishing variety at harvest.

Longreach disease ratings have been compiled from LongReach disease screening data and from NVT disease ratings March 2024. Resistance ratings: VS=Very susceptible, S=Susceptible, MS=Moderately susceptible, MR=Moderately resistant, R=Resistant. Tolerance ratings: T=Tolerant, MT=Moderately tolerant, MI=Moderately intolerant, I=Intolerant, VI=Very intolerant. p=Preliminary data based on limited data set. #=may be more susceptible to alternative pathotypes.

LONGREACH HAVOC

GRAIN PACKAGE

Grain receivals data from NVT trials indicate that LRPB Havoc is less likely to be downgraded when compared to other key varieties. This data shows NVT results (2019-2020) from 78 sites, comparing test weight and screenings for basic grading criteria at delivery. This data indicates that Havoc may be downgraded less often, in fact, half to one third the number of times when compared to other key varieties for test weight. Havoc went above the 5% screenings cut-off significantly fewer times than Scepter and Mace. Havoc is a reliable and robust on farm performer, that is less likely to be downgraded at delivery than many other key varieties. It stands up to hard tight finishes and still delivers when it counts for the grower.

WA main season grain receivals data, showing test weight (kg/hl) and 2.0mm screenings (%) from the 2019-2020 NVT data across 78 Sites				
	Test weight	Screenings		
Variety	Avg kg/hl	Sites <76 Kg/hl	Avg % >2.0mm	Sites >5% screenings
LRPB Havoc	80.73	5	3.1	15
Corack	79.77	10	2.9	15
Scepter	79.44	14	4.5	26
Mace	79.37	11	4.2	24

YIELD PERFORMANCE

Havoc excels in the tough finishing environments of Agzones 1, 2, 4 and 5.

WA Main season long term (2018-2022) NVT MET predicted yield (%SMY) yearly comparison across Agzones 1, 2, 4 & 5						
	Group	2018	2019	2020	2021	2022
	Mean yield	3.55 t/ha	1.77 t/ha	2.60 t/ha	4.21 t/ha	4.55 t/ha
Variety	Trials	33	34	35	31	37
Scepter	170	109	111	109	109	107
LRPB Havoc	170	106	109	108	109	100
Corack	102	105	108	105	107	98
Mace	170	102	106	103	102	98

LRPB Havoc is available through our Associate Network for contact information please go to www.pacificseeds.com.au

PLANT BREEDERS RIGHTS

LongReach Havoc is protected by Plant Breeders Rights (PBR). In regard to propagating material (planting seed) of this variety, any unauthorised commercial production or reproduction, conditioning for propagation, offering for sale, sale, import, export or stocking of propagating material is an infringement under the *Plant Breeders Rights Act 1994*. Grower to grower trading of seed of LongReach Havoc is allowed.

End Point Royalty (EPR) Each time a grower purchases seed of LongReach Havoc the grower agrees to comply with the Variety Licence and Royalty Agreement, including agreement to pay the EPR of \$4.00 per tonne (GST excl). EPR is payable on all grain production, except on seed retained by the grower for replanting by the grower. The majority of the EPR will be paid by Advanta Seeds to the Breeder (LongReach Plant Breeders) for investment in future wheat breeding programs.
