

Predict with accuracy,
plan with confidence.

Take the guesswork out of growing with Skip, a cutting-edge tool from Pacific Seeds, ClimateAi and Goanna Ag.

Meet the future of on-farm decision making. Skip (smart knowledge is power) delivers unique insights to help you plan your season and maximise your potential yield.

Skip allows you to plan out each week, month and year by arming you with tailored information, such as:

Historic, observed and forecast data on

- Temperature range
- Precipitation
- Soil temperature
- Growing degree days

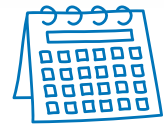

Customised seasonal alerts, including

- Heat wave
- Frost
- Flood
- Drought
- Soil temperature

And with an easy-to-use, customisable interface, the future of your farm is at your fingertips.

ClimateAi sources its analytics data from a wide range of public and private platforms, which it then combines with agronomics and machine learning to deliver a superior forecasting model.

Gain access to insights and tools that help shape decisions on crop planning and management. This includes the planting dashboard, which optimises planting times to suit expected seasonal conditions.

Stay on top of key updates in your location with short-term and seasonal weather forecasts, as well as customised alerts.

Drop a pin on your exact location for tailored data and information. You can also mark multiple spots for different fields or farms and receive unique updates for each one.
