

**LRPB Major
Mid Slow Maturity built for Southern NSW and Victoria**

WHEAT

LRPB Major – Mid Slow Maturity built for Southern NSW and Victoria

- Beckom X LRPB Mustang cross made with the aim to build a variety with strong acid and sodic soil tolerances suitable for NSW and Vic
- Stable Mid Slow maturity suitable for an Early - Mid Season sowing window across NSW and Vic
- Good Disease package for NSW & Victoria combined with strong performance on both acid and sodic soil
- AH classification Sth NSW, Victoria, and SA

Agronomy

LRPB Major – Mid Slow Spring Wheat

Phenology - Southern NSW LRPB Main and Early Season Trials

Southern NSW Average Days to Heading 2021-2022
LRPB Main Season Trials (4 Sites)

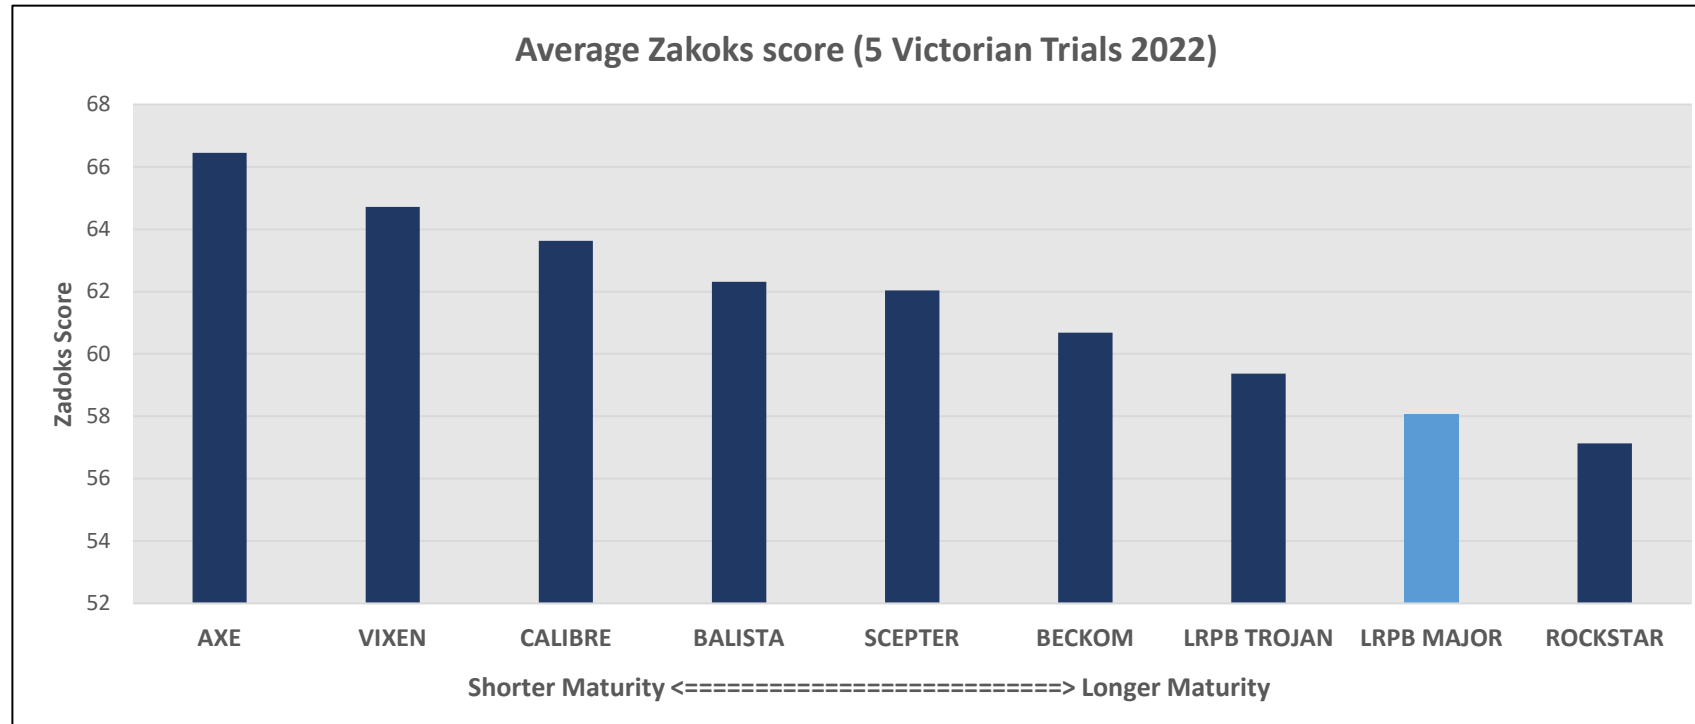

Southern NSW Average Days to Heading 2021-2022
LRPB Early Season Trials (5 Sites)

- Mid Slow Maturity (Australian Cereal Phenology Classification)
- Multi year phenology data suggests a flexible Mid Season sowing window suitable for Early to Mid May sowing across Southern NSW

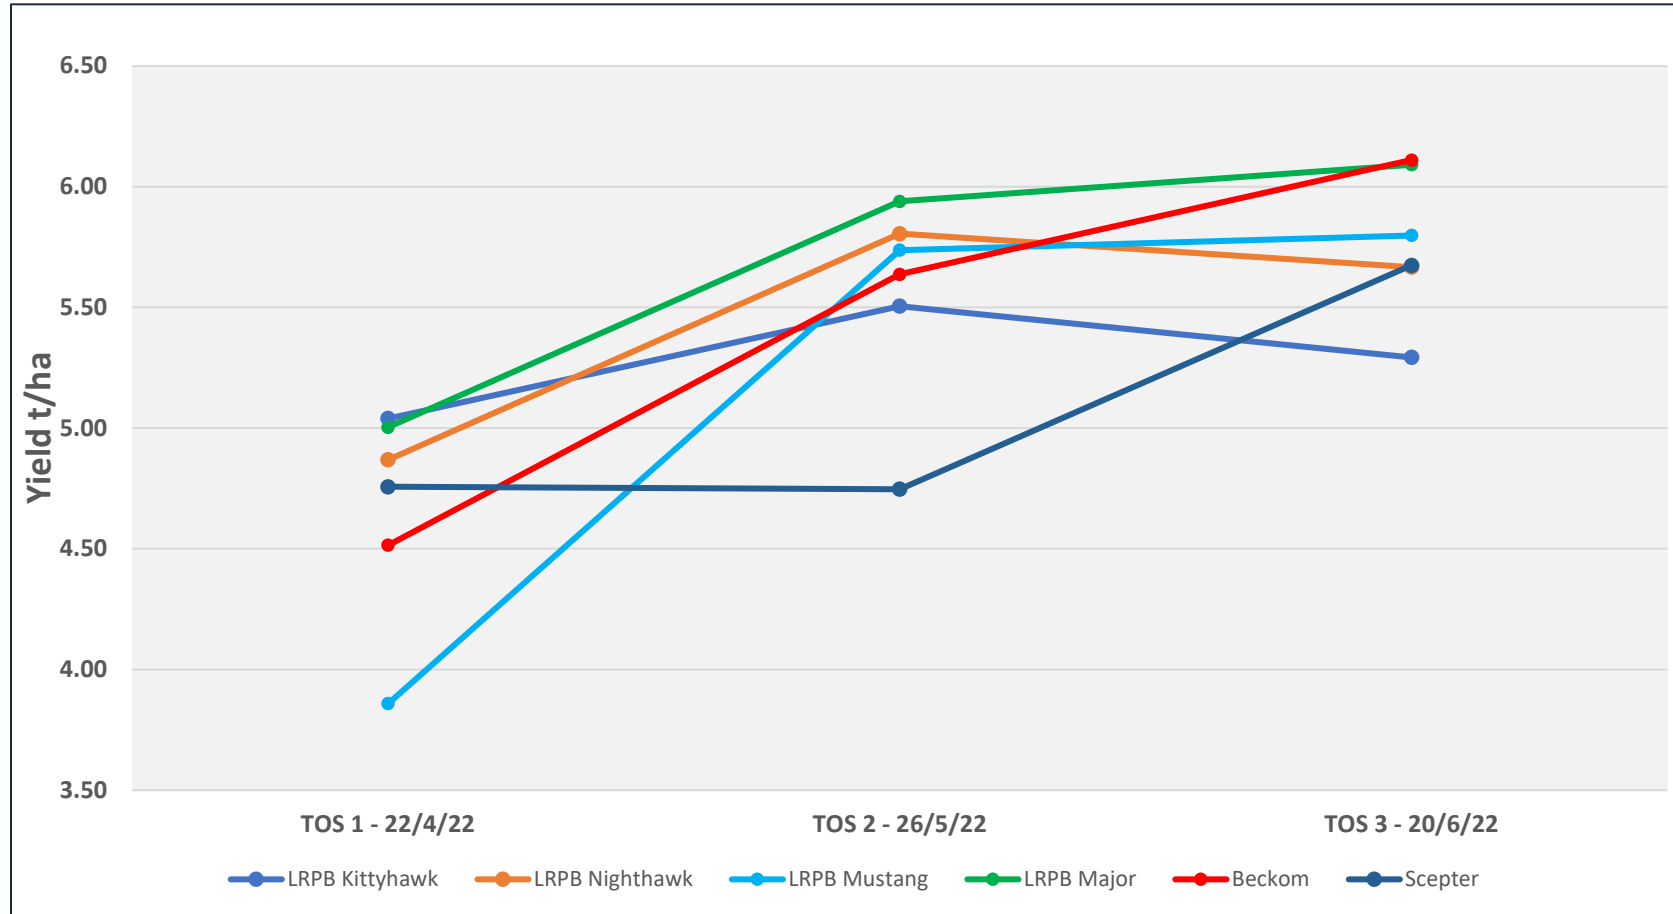

LRPB Major – Mid Slow Spring Wheat

Phenology - Victorian LRPB Breeding Trials

- Mid Slow Maturity (Australian Cereal Phenology Classification)
- In trials throughout Victoria LRPB Major suits sowing in the seeding window prior to Scepter, which has been widely used by growers of LRPB Trojan and Rockstar

LRPB Grenfell Time of Sowing Trial 2022

LRPB Major showed strong stable yields across a wide range of sowing times in 2022

LRPB Major – Plant Height and Lodging

Average Plant Height
(7 NSW LRPB Early Season sites 2020-2022)

Average Lodging Score
(11 LRPB Early Season Trials 2020-2022)

LRPB Major has a short compact canopy well suited to full stubble retention farming systems combined with excellent standability

LRPB Southern NSW Abiotic Screening Trials 2022

LRPB Major shows excellent yields under both low pH and sodic field conditions. This tolerance has also been confirmed by LRPB lab experiments and marker testing.

LRPB Southern NSW Early Season MET Analysis (2019-2022)

Yield Regression

LRPB Major has shown to be outperforming current market varieties in most yield environments across the four years of trials included in this analysis. Close examination of the data also shows that the line is extremely competitive in higher yielding trials but has a distinct yield advantage in lower yielding trials over competitor varieties

Note – LRPB Major entered trials in Victoria and South Australia Early sowing trials between 2019 and 2021 to evaluate its suitability for the High Rainfall Zone Market

LRPB South Australia & Victoria Early Season MET Analysis (2019-2021)

Yield Regression

LRPB Major has shown consistently higher yields than the other main season season varieties in the high rainfall zone trials. This trial set is suited to Slow to Very Slow maturing varieties and LRPB Major was moved to the Main Season trials in SA/Vic in 2021 with a year of cross over in both sets.

Note – LRPB Major entered trials in Victoria and South Australia Early sowing trials between 2019 and 2021 to evaluate its suitability for the High Rainfall Zone Market

Trials in Analysis		6	13	17	13	49

Note – LRPB Major first entered selected Main Season trials in Victoria and South Australia in 2021 so 2019/2020 is predicted yield performance

LRPB South Australia & Victoria Main Season MET Analysis (2019-2022)

Yield Regression

LRPB Major has shown consistently higher yields than Scepter in Main Season trials over the 2 years of testing and similar yield to Rockstar. These trials test a range of maturities over a wide range of yield potentials with LRPB Major's Mid-Slow maturity being best suited to the >4t/ha regions.

LRPB Major Vs Beckom Lockhart LRPB Breeding site 2022

LRPB Major has improved Septoria resistance combined with decreased physiological yellowing over its Beckom parent in the field during the high expression year of 2022

Photo – LRPB Major (Left), Beckom (Right).
LRPB Lockhart Breeding site 2022

LRPB Major – Stripe Rust

LRPB Major has shown stripe rust resistance levels that have proven to be highly manageable with industry standard fungicide control strategies in high pressure years.

LRPB Major Stripe Rust reaction under Extreme disease pressure from multiple pathotypes with limited fungicide application.
Wallendbeen 2022
